

Lab 2

PART 1 - Hostile takeover of the Gaza Sky Geeks website

1. Open Google Chrome or Chromium
2. Go to **`http://www.gazaskygeeks.com`**
3. Right click anywhere in the browser window and choose "Inspect element".
4. Click on "Console"
5. In the console, type:

```
document.getElementById( 'page-854' ).style.display='none' ;
```

What happened? What do you think is going to happen when you refresh the page? Discuss with your team, and once you've reached a consensus, try it out to see if you were right.

PART 2 - Making an interactive news feed

1. In this lab you will design a social network for the Gaza Sky Geeks called "GeekBook". You can download the HTML and CSS source code from my GitHub account: <https://github.com/lrnzbr/geekbook>
2. In the head, under where you've imported your css, add:

```
<script type="text/javascript" src="http://code.jquery.com/jquery-latest.min.js"></script>
<script type="text/javascript" src="http://code.jquery.com/ui/1.10.3/jquery-ui.min.js"></script>

<script type="text/javascript">

$(document).ready(function () {
    alert('I love makloobah!');
});

</script>
```

3. Save and reload the page. If you did this right, you should get a popup that tells you that you love makloobah.

4. Now remove the alert statement and replace it with:

```
$( 'body' ).click(function() {  
    var firstElement = $(this).first();  
    firstElement.css( 'background-color', 'red' );  
});
```

Click anywhere in the body of your news feed page and see what happens.
